Sam Day Endowed Lectureship in Pediatric  
Oncology

# Shifting the Paradigm: Challenges and Opportunities in Pediatric Cancer Drug Development

**Samuel Blackman, M.D., Ph.D.**

Head of Research & Development  
Day One Biopharmaceuticals, Inc.

Samuel Blackman, M.D., Ph.D. will provide an overview of the historical and current gaps in drug development efforts for adult patients and pediatric patients, the impact on the pace of pediatric cancer drug development, and the underlying factors. Dr. Blackman will review the current regulatory (FDA, EMA) requirements and incentives for pediatric cancer drug development, and the benefits and limitations of current regulations. This talk will provide insights into the decision-making model within the biopharmaceutical industry when it comes to pediatric drug development, and potential solutions for accelerating the pace of pediatric cancer drug development.

**The Sam Day Foundation** is committed to supporting research and advocacy for rare pediatric cancer types, and life-giving experiences for children with cancer. They established this lectureship to honor the life and legacy of Sam Day by making it possible for OHSU providers, researchers, trainees, and staff to learn from distinguished leaders in the field of pediatric oncology.

Please join us for the **[Sam Day Endowed Lectureship in Pediatric Oncology](#)**.
